annual savings opportunity
1.8% of \$21.08B billed

Customers by rate-fit category (weighted to 6.0M)

Annual savings opportunity by segment

What the data says

- Churches / houses of worship:** 35K of 40K (86%) are missing TOU or SDTR; Sunday and Wednesday-evening peaks fall off-peak, so they are worth **\$81.3M/yr** (about 2,357 dollars per church).
- Residential RTR-1:** 171K of 208K current RTR-1 customers (82%) would pay less on plain RS-1 (\$28.3M/yr). Afternoon AC puts about 33% of kWh on-peak, above the roughly 30% break-even.
- Residential should-be-TOU rate:** 10.1% of EV owners and 12.5% of solar homes, vs 1.2% of other homes. These are the natural targets for RTR-1 marketing.
- Schools:** 4,812 should add SDTR (\$26.5M/yr), because summer break removes their 3-6 PM Jun-Sep demand. **Convenience stores:** 27K have a material saving (\$40.3M/yr), mostly high-load-factor GS-1 sites near 25 kW that would pay less on GSD-1.
- Northwest (ex-Gulf) division:** 27K customers on a wrong rate, \$21.6M/yr. **Mix:** residential \$35.6M vs C&I \$333.5M. With a modest 10% on-peak load shift, the upside grows by a further \$447.2M/yr.

Top segments by opportunity

Segment	Customers	% wrong	\$/yr
Churches/worship	40K	87%	\$81.7M
Restaurants	70K	60%	\$51.2M
Convenience/gas	35K	77%	\$40.3M
Other small comm.	330K	10%	\$34.8M
Res single-family	3.10M	6%	\$27.2M
Schools	7,000	71%	\$27.0M
Scrapyards (crushers)	1,500	66%	\$23.5M
Small office	220K	11%	\$23.1M
Small retail	230K	12%	\$19.0M

Recommended actions

- Proactive C&I rate-advisory outreach: SDTR for schools and churches, GSDT/SDTR for GSD-1.
- Targeted RTR-1 marketing to EV and solar homes; offer RS-1 reversion to RTR-1 customers who lose money.
- Annual automated rate-fit screening from AMI (this pipeline).

Synthetic 100,000-customer stratified sample (80K residential / 20K C&I, C&I oversampled) weighted to a 6.0M-customer design population (5.0M residential, 1.0M C&I), 15-min interval history = calendar 2025 (synthetic weather); next 12 months projected with weather normalisation and segment trend; bills priced on FPL Section 8 sheets effective 2026-01-01 (base, demand, energy, fuel, conservation, capacity, environmental, storm protection, transition rider, 2.6% GRT/RAF; franchise fees and taxes excluded). Savings = rate switch only, no behaviour change; materiality = max(\$25, 2% of annual bill). Generated 2026-09-28.
